## Project Title: Banff National Park Website

I want to build a site with multiple pages, with a navigation bar at the top of the page, or (if I can figure out how) a drop down menu from the corner of any page. The Wikipedia site on Banff has more content than I probably will know what to do with or use, so I am not worried about running short on content. In terms of photography, there seems to be a good amount on the Wikipedia website, and my brother and friend went there and took tons of photos over the summer that I will ask to use. There are also lots on creative commons sites.

- **Home Page/Introduction:** Overview of the park, what it offers, distinguishable/notable characteristics
- **History**
- **Geology**
- **Wildlife**
- **Tourism/Human Impact**
- **Sources:** Wikipedia source, photography sources
